SERVICE OVERVIEW

Penetration Testing Services

Verify security with expert-led penetration testing services

Stay ahead of potential threats by identifying vulnerabilities before hackers do. Expert-led Penetration Testing Services from NuHarbor Security employ the same tactics, tools, and techniques as the world's most prolific bad actors, uncovering issues before they can be exploited. Our testing services also provide a clear view of attack paths that are otherwise nearly impossible to detect.

Address all your needs with one partner

We understand that you have your own unique security requirements and environments. That's why we offer a variety of security testing approaches and packages tailored to meet your specific needs. We work with you to plan testing that aligns with your business priorities and schedule.

Security testing services available

> External Infrastructure Penetration Testing
> Internal Infrastructure Penetration Testing
> Wireless Penetration Testing
> Web Application Testing
> Phishing Assessments
> Configuration Reviews
> CIS Benchmarks

Cybersecurity testing is a necessity not an extra

Threat actors succeed because they approach your systems in unpredictable ways. We bring a perspective and experience that considers the unpredictable, ranking all findings by impact and ease of remediation so you can enhance your security and address issues swiftly. Our Penetration Testing Services empower you to:

✓ Collaborate with expert penetration testers with years of experience in both public and private sectors.

✓ Rely on human-based planning to simulate actions of a real hacker because automated penetration testing can't identify these common errors.

✓ Identify and determine the scope of risk of exploits with customized penetration testing services that balance cost and coverage without compromising quality or disrupting business operations.

✓ Gain visibility into exploitable vulnerabilities and obtain actionable recommendations for remediation.

✓ Access evidence-based reporting to inform your security strategy, prioritization, and spending for enhanced protection.

Verified experience you can trust

Discover why over 500 organizations trust NuHarbor Security with their cybersecurity needs. With NuHarbor, you're not just hiring a penetration service provider—you're gaining a trusted and strategic partner in security.

> "NuHarbor conducted a web application penetration test on a few of our edge applications. They discovered many configuration weaknesses including insecure direct object reference (IDOR). They notified us immediately and offered advice on how to fix it. Their skilled engineers provided step-by-step assistance and retested to ensure that this critical vulnerability was fixed."
