

VENDOR MANAGEMENT SERVICES

WHY IS VENDOR MANAGEMENT IMPORTANT?

In today's digital age, many companies rely on third-party vendors, or outsourced providers, that have access to confidential data in their network. At the very least, every company possesses personal employee and client information like identifiable information, health information, payment information, and company financial information.

Despite a company's reliance on vendors to secure and protect their data, your company is still responsible for whatever happens to that data. Therefore, companies must ensure that their vendors are indeed securely storing their data.

WHY NUHARBOR SECURITY?

Properly vetting vendors is critical to the overall security of your company. At a minimum, vendors should be assessed on an annual basis to determine security posture. Our expert staff has experience evaluating vendors and a unique understanding of security areas that many evaluators don't possess. NuHarbor's specialists conduct a personalized assessment to meticulously evaluate the security of important company data. Our team goes the extra mile to thoroughly determine risk so your company can make timely, fact-based decisions.

OUR METHODOLOGY

To accurately determine a vendor's security risk level, we implement the following processes:

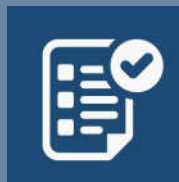

Partner Trust (Security) Assessment

NuHarbor provides the vendor with a questionnaire regarding privacy and security impact and requests documentation to identify potential security weaknesses.

Privacy Impact Assessment

This element measures privacy and data governance control risks.

Vendor Impact Analysis

This analysis measures the impact to your business given an unavailable service.

OUR SOLUTION

Once all aspects of the vendor assessment are complete, NuHarbor provides an executive summary and a detailed report on findings to our client. From there, NuHarbor tracks every step of the remediation process and provides a dashboard so your company can easily follow our progress. Our goal is to maintain a strategic partnership between both client and vendor by lessening security risks.
